

Sanseveria

SNAKE PLANT

About

The Snake Plant, Latin name *sanseveria trifasciata*, is a really easy-going plant, and a great plant for beginner growers. It is easy to take care of and helps slowly filter and clean indoor air. Snake plants like medium amounts of light and water, but can handle drier environments and a bit more shade.

Care

Sunlight: medium light to shade

Water: keep soil moist, not wet.

Pets

Pets: snake plants contain saponins, which are mildly toxic to cats and dogs. It's good to keep your snake plant on a stand or a shelf where your pet can't reach it.
